Chapter 1

Installation

semnova is not currently available on CRAN. It is therefore required to install **semnova** via github using, for instance, the **devtools** package. Make sure you installed the package beforehand or simply copy the following code to install both packages in one step.

```
if (!require("devtools", character.only = T)) {  
  install.packages("devtools")  
}  
  
devtools::install_github("langenberg/semnova")
```

After running these lines, we are ready to go and perform our first analysis.
